

# MIS QUARTERLY RESEARCH CURATION INFORMATION SYSTEMS DEVELOPMENT

Information Systems Development (ISD) is the entire suite of development activities (e.g., planning, analysis, design, building, testing, and maintenance) undertaken by agents (humans (individuals/collectives) or software) to create a working information system.

ISD is a fundamental IS research topic embedded in a social, organizational, and technical context with stakeholders who influence and are influenced by the ISD activities, as evidenced by the 101 publications on the topic.

RESEARCH CURATION TEAM:

SABINE MATOOK  
THE UNIVERSITY OF QUEENSLAND

GWANHOO LEE  
AMERICAN UNIVERSITY

BRIAN FITZGERALD  
LERO, UNIVERSITY OF LIMERICK
